

WP12 – The Deployment plan – action required to realise 2050 goals

In order to hit 2050 goals for deployment much still needs to be done;

The Deployment Plan has gathered the conclusions of the different Work Packages within PROMOTiON into a single document.

In reality, there is much work still to be done in order to build an Offshore Grid in the Northern Seas.

This diagram provides an overview of subject areas that are still to be addressed.

PROMOTiON has categorised its study into six areas:

1. Technological
2. Markets
3. Legal & Regulatory
4. Governmental
5. Economic
6. Financial

The subject areas to be addressed and the tasks to be delivered are placed on a timeline. Within D12.4, each area is addressed; the stakeholders are identified and interdependencies described.

PROMOTiON has progressed meshed HVDC offshore transmission grids in the northern seas.

There is still much to do if the 2050 clean energy targets are to be achieved.
